

## How to act?

- + The treatment of external inflammation of the auditory canal is complicated because the characteristic construction of the dog's auditory canal creates excellent conditions for the multiplication of bacteria and fungi.
- + As a result, antibiotic treatment may in many cases be insufficient to fully cure.
- + Repeated inflammation and repeated visits are stressful for both owners and their pets.
- + However, repeated use of antibiotics may lead to an increase in the resistance of microorganisms inhabiting the auditory canal.

All **VetExpert** products are manufactured in factories with the GMP (Good Manufacturing Practice) standard. This is the **highest quality standard** in pharmacy.

The compositions are developed in cooperation **with veterinarians and researchers.**

**OtiHelp**, like all VetExpert products, is recommended and sold through veterinary surgeons.

OtiHelp is a top quality product at an **affordable price.**

## OTIHELP EAR LOTION

**Effective supportive**  
treatment of otitis externa

## What is otitis externa?

**Otitis Externa**, or inflammation of the external auditory canal **is one of the most common canine diseases.**

The main cause of the **problem is the development of bacteria or fungi** within the external auditory canal. Untreated inflammation of the external ear can lead to inflammation of the remaining parts of the hearing system, **which can lead to hearing loss, facial nerve paralysis**, motor dysfunction and nystagmus.

### How to recognize ear canal inflammation?

Symptoms that should alert the owner of a dog are:

- + Head shaking and tilting to one side.
- + Frequent scratching around the ear.
- + Redness of the ear canal skin.
- + Excessive amounts of wax, oil, or scabs.
- + Unpleasant smell from the ear canal.
- + Excessive sensitivity around the ear.

OTIHELP

VetExpert **OtiHelp** is an **ideal product** for restoration and maintenance of **proper functioning of the ear canal**. It can be used as a supportive tool in both bacterial and fungal infections.

The active substances contained in the product (**Chlorhexidine and Tris EDTA**) have an antibacterial activity, while the acidic pH of the product prevents the development of bacteria and fungi.

**The composition of menthol, allantoin, salicylic acid and panthenol** relieves symptoms of inflammation and supports the healing process of the inflamed mucosa of the auditory canal.

## Usage

- 1 OtiHelp as an emulsion has an oily consistency.
- 2 The preparation should be administered into ear canal, and then the base of the pinna should be gently massaged.
- 3 Take a special caution in dogs experiencing severe ear pain.
- 4 Please follow your veterinarian instructions.
